

Walk with Nike Grind

A highly porous, sustainable and unique pedestrian surface

playtop®

SAFER SURFACING

Performance Characteristics

Playtop Walk with Nike Grind is a truly unique and environmentally friendly surfacing system. One key benefit is the high level of permeability; rain water rapidly drains through the surface, decreasing pressure on existing water ways and reducing the risk of flooding.

Incorporating natural aggregate and recycled rubber granules from worn out sport shoes, Playtop Walk with Nike Grind is truly innovative. The porous, durable and decorative surface is accessible for wheel chair users and suitable for pedestrians, runners, bicycles and prams.

Playtop Walk with Nike Grind can be installed directly onto a crushed stone foundation, concrete or tarmac.

Areas for use

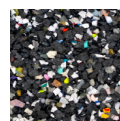

Features and Benefits

- **Environmentally friendly**
- **Durable**
- **Flexible**
- **Anti-frost**
- **UV-resistant**
- **Low maintenance**
- **Sustainable**
- **Unique appearance**
- **One layer system**
- **High-speed drainage**
- **Cost effective installation**
